Introduction
Accounting is a language of business. The operational performance of a business can be expressed by the results of its financial accounting. This course will enable students to understand the accounting concepts of credits and debits as well as accounting procedures. By doing so, students will not only be able to understand the contents of financial statements, but also the implications that can be derived. After the completion of this course, students will be able to successfully analyze financial statements for any type of business and then determine the proper course of action for the business.
