Introduction
1. Provide a basic treatment of all of the important aspects of system simulation
2. Provide the upper-level undergraduates with a basic understanding for system modeling and simulation.

Outline
This course will introduce an understanding of the fundamentals, implementation, and application of System Simulation techniques from a practical point of view. And then PC-based Matlab will be adopted for the design and simulation with some Mathematical Models. Finally, the white noise analysis in the time domain response will be demonstrated.

Prerequisite
