Introduction
Engineering Mathematics (I) is a fundamental course connecting physics and mathematics with practical problems. This course will provide students a thorough understanding of the principle of ordinary differential equations and Laplace transformation. The adequate ability to develop the mathematical model and to analyze the engineering system will be developed.

Outline
<ol style="list-style-type: none">1. Calculus basis2. First-Order Differential Equations3. Linear Differential Equations of Second and Higher Order4. Laplace Transforms

Prerequisite
