Introduction
<p>The coding field has exploded with new theoretical developments, several of which have had significant practical consequences. Three of these new developments stand out in particular: coded-modulation, soft decision decoding and soft-in and soft-out iterative decoding techniques. These new developments have revolutionized the way coding is applied to practical systems.</p> <p>Goal: convolutional codes, coded-modulation, soft decision decoding, turbo decoding, low density parity check decoding</p>
