Introduction

This course is designed to let the students learn how to do research on a scientific issue and what are the important points about studying a scientific issue. The professional capability of doing research and writing a paper are also well trained.

Outline

1st wk: Explain to the students about how the course will be going on and the skill of planning a research project and writing a thesis.

2nd wk: Select a thesis and make it as an example for comments.

3rd wk: Ask the students in turn to evaluate and present anhis/her thesis as the format that the teacher has required.

Discussions are also required. Finally, the teacher will make comments and conclusions about the student ' s presentation.

Prerequisite

Students should have a BS degree with certain English proficiency.
