Introduction

The basic structure of the book is the main functional groups, from the simplest to the more complex allyl compounds, but the book also emphasizes the similarity-based interpretation of reaction mechanisms, especially in the introduction section carbonyl chemistry.

The term is for the early part of organic chemistry for teaching students want to learn basic first part and then on to

have a certain understanding of organic chemistry

- 1 Structure and bonding; acid and alkali
- (2) the characteristics of organic compounds: alkanes
- 3 characteristics of organic reactions: vinyl
- 4 the reaction of vinyl and polyacetylenes
- 5 aromatic compounds
- 6 stereochemistry
- 7 halogen alkane

Outline

The basis of organic chemistry:

- 1 Structure and bonding; acid and alkali
- (2) the characteristics of organic compounds: alkanes
- 3 characteristics of organic reactions: vinyl
- 4 the reaction of vinyl and polyacetylenes
- 5 aromatic compounds
- 6 stereochemistry
- 7 halogen alkane
