Introduction

This course is designed to let the students learn how to grow medicinal plants and its principals. Practice in the experimental farm as well as a field trip is required, too.

Outline

1st wk: Explain to the students about how the course will be going on and the theory of growing plants.

Experimental farm will be ready for student to grow.

2nd wk and on: Teaching about the classification, structure, growth, propagation, light, soil, water, air, fertilizer, pruning and training, etc. of growing plants will be emphasized. Field trip will be arranged, too. Students are asked to grow at least 3 different kinds of medicinal plants record and photo them for preparing a WORD and PPT homework and presentation.

Students are also required to show his/her presence in the class each time. Otherwise they will be given failure for the class.

Prerequisite

Students should have biology background with the proficiency of farming
