Lecturer		Full or Part-time	
Required / Credit	Optinal / 3	Graduate Class	NO
Time / Place	(　)34　/ H726 (　)7　/ H834	Language	Chinese

Introduction

This course examines the hardware and software features of the MCS-51 family of micro-controllers. Lecture materials emphasizes architecture and programming rather than electrical details. Students should be encouraged to experiment by entering the examples in the text book and develop the potential to undertake large-scale programming. The adequate ability to establish the practical micro-process system in engineering applications will be developed.

Outline

Prerequisite

electrical circuit
