

99-1 Preliminary Syllabus, Da-Yeh Univ

Information			
Title	結晶學與繞射概論	Serial No. / ID	1456 / MS11006
Dept.	材料科學與工程學系	School System / Class	大學日間部3年2班
Lecturer	宋皇輝	Full or Part-time	專任
Required / Credit	Required / 3	Graduate Class	No
Time / Place	(二)2 / H343 (四)56 / H343	Language	Chinese

Introduction
This course is divided into two main parts: crystallography and X-ray diffraction analysis. The subject of crystallography is to introduce the the ideas of symmetry, structures, lattices and the architecture of crystals. The subject of X-ray diffraction analysis is describing the principle of X-ray diffraction and its applications in analysis of actual materials.

Outline
Basic Crystallography Geometry and Stereographic Projection of Crystals Reciprocal Lattice Characteristics and Detection of X-rays Coherent Scatterings and Diffraction Fourier Transformation Diffractions of Real Crystals Principle of X-ray Diffractometer Powder Diffraction

Prerequisite
Calculus, General Physics
