

## 99-1 Preliminary Syllabus, Da-Yeh Univ

Information			
Title	應用統計	Serial No. / ID	2717 / GMN5001
Dept.	管理學院碩士在職專班	School System / Class	碩士在職專班1年2班
Lecturer	胡瓊元	Full or Part-time	專任
Required / Credit	Required / 3	Graduate Class	No
Time / Place	(三)ABC / B005-1	Language	Chinese

Introduction
<p>The purpose of this course is to quantify the graduate professors statistical methods needed for the research, covering the independent samples T test, ANOVA, correlation analysis, partial correlation analysis, simple linear regression analysis, multiple regression analysis, hierarchical regression analysis, including Control variables and dummy variable regression analysis, path analysis. Through this course, students can learn a variety of scales the causal relationship between IV and DV statistical methods used, and how to test mediation and regulation</p>

Outline
<p>De s c r i p t i v e statistics</p> <ul style="list-style-type: none"> <li>Independent sample T test</li> <li>Paired sample T test</li> <li>ANOVA</li> <li>Correlation Analysis</li> <li>Partial correlation analysis</li> <li>Simple linear regression analysis</li> <li>Multiple regression analysis</li> <li>Regression analysis with dummy variables</li> <li>Hierarchical regression analysis</li> <li>Regression analysis with control variables</li> <li>Verification mediator</li> <li>The test moderator</li> <li>Path analysis</li> </ul>

Prerequisite
Statistics
