Introduction

Basic biotechniques, for example Polymerase Chain Reaction (PCR), cloning, DNA sequence and genomics, would be introduced and how these techniques are applied to agriculture, medicine and biodiversity, etc. The goal of the course is the student should be equipped with the knowledge of those techniques and the knowledge to apply.

Outline

DNA methods (PCR, cloning, and sequencing), RNA methods (transcriptome), genomics, protein techniques, immuno analysis, cell biology, microarray and papers reading.

Prerequisite

It would be better students have taken the molecular biology and biochemistry courses.
